Mauro Genna

Full-Stack Engineer | TypeScript, React, Next.js, Node.js, PostgreSQL | AI Agents, RAG & Automations | LATAM, Remote

Mendoza, Argentina | gennamauro18@gmail.com | +54 261 697 6887 | linkedin.com/in/maurogenna | github.com/maurogenna23 | maurogenna.dev

Summary

Full-stack engineer with 3.5 years of experience building production software end to end, focused on AI-powered products. I design the architecture, data model, APIs and interface, and I work directly with clients and stakeholders. I have shipped a multi-agent AI system with human approval in production, an AI voice assistant serving 50+ residential communities, and a billing migration of hundreds of active subscriptions. I use Claude Code daily and review everything it produces. Based in Argentina (UTC-3), working remotely with US and European teams.

Core Technologies

- Languages: TypeScript, JavaScript, SQL, Python (working knowledge)
- Frontend: React, Next.js, Tailwind CSS, Zustand
- Backend: Node.js, NestJS, REST APIs, RabbitMQ
- AI: OpenAI API, function calling, AI agents, multi-agent systems, RAG, hybrid search, pgvector, LangGraph, Retell AI, ElevenLabs, LiveKit Agents, n8n, Claude Code
- Databases: PostgreSQL, MongoDB, DynamoDB
- Cloud and tools: Docker, Railway, Vercel, AWS (S3), Git, Vitest
- Architecture: multi-tenant data isolation, role-based access control, subscription billing (Creem), technical architecture, database design

Professional Experience

Full-Stack Engineer, AI Projects, UseTeam

Spain (Remote) | April 2025 – Present | Independent contractor

- Key contributor in a team of 4 engineers delivering AI-powered MVPs for international clients, with 5+ products shipped from concept to production.
- Designed and implemented an AI voice assistant for property management that handles incident reporting for 50+ residential communities in Spain.

- Implemented hybrid-search RAG (semantic search, keyword search and reranking) on PostgreSQL with pgvector for a client project in production.
- Worked with the n8n workflows that sit behind client AI products.
- Worked directly with clients to turn ambiguous requirements into scoped technical solutions, balancing delivery speed, scope and maintainability.

Software Engineer, Highpoint Growth Networks

United States (Remote) | March 2024 – August 2026 | Independent contractor

- Core engineer in a 5-person team building a SaaS ad-tech platform in production, supporting thousands of active screens across hundreds of venues and advertisers.
- Led the frontend, including architecture and UX/UI: reworked the existing product surface and directed the design of new features.
- Architected and executed the migration from an external billing provider to an in-house subscription system, moving hundreds of active subscriptions. Reconciled both systems before the cutover and fixed a rounding discrepancy before migrating, keeping billing accurate for every customer.
- Designed a multi-agent AI system with role-scoped tools and human approval before any database write, plus a read-only SQL sandbox for admin reporting.

Frontend Developer, Synergiart SL

Spain (Remote) | April 2023 – March 2024

- Built customer-facing web applications by translating Figma designs into responsive, production-ready interfaces.
- Developed reusable components with React and Tailwind CSS across multiple projects, managed state with Zustand and integrated MongoDB-backed data.
- Collaborated across projects, adapting implementations to product requirements and delivering from design to production.

Projects

Arnie, AI agent platform for small businesses (2026)

arniechat.com | Founder and sole engineer

- Designed and built the whole platform solo: NestJS, Next.js, PostgreSQL, chat and voice agents with OpenAI function calling, Retell AI and ElevenLabs, and subscription payments with Creem.

- Implemented retrieval (RAG on PostgreSQL with full-text and trigram search) grounded in each client's data, with multi-tenant isolation in a shared data-access layer.
- Ran customer acquisition and direct sales: daily demos for local businesses and a small group of salespeople.

Open-source projects (github.com/maurogenna23)

- site-intel: CLI that chains LLM calls to turn a company URL into a sales-ready dossier, with a guardrail against invented links and a comparison of models on cost and quality. 60+ tests, no API key.
- llm-tool-calling-lab: assistant that books tables through LLM tool calling across 5 providers, with evidence-based model routing and a bench that scores the database instead of the answer. About 170 tests.
- rag-postgres-retrieval: multi-tenant retrieval engine on plain PostgreSQL (full-text, trigram, unaccent), extracted from a production assistant, with tested tenant isolation. 16 tests.

Education

- Full Stack Web Development, Henry Bootcamp (2023)
- Frontend Development, NextU (2022)

Languages

Spanish (native) | English (professional working proficiency) | Italian (B1, CILS certification)
